EDUCATION

Software Engineering degree
CESI École d'Ingénieurs,
Bordeaux · 2018 to 2023

LANGUAGES

French: native · English: fluent,
TOEIC 955 · Spanish: B1

ENGINEERING APPROACH

- ↳ Own the outcome
- ↳ Explain decisions
- ↳ Ship production-ready work
- ↳ Adapt to the team

Software
engineer

OPEN TO SELECTED ROLES AND CONTRACTS

I take **products** from a vague brief to **production**. I can own the **product**, **technical decisions** and **delivery**, or join a team and start shipping quickly.

EXPERIENCE

2023 to now

Independent product engineer

Freelance & own products · Remote

Own complete **delivery** for client and independent **products**: discovery, technical choices, interface design, **full-stack** development, deployment and **product** iteration.

Recent work includes **AIDEN**, **Mobile GOAT**, **Intouch** and **Btrend**: agentic AI tooling, multi-tenant mobile **products**, geolocation, real-time features, campaign workflows and payments.

2022 to 2023

Full-stack developer

Zaka-Services · Bordeaux

Designed **architectures** and shipped client applications across frontend, APIs, databases, Docker and **production** infrastructure.

Built **Monumothèque**, a heritage platform with 3D/360° visits and an editorial back office, and **LaFlowBox**, a real-time 3D public-transport data platform.

2021 to 2023

Freelance software developer

Selected missions

Delivered web and mobile work for **MyDéménageur**, **GNews Immo**, **Spectrum** and **Onlycoins**: redesigns, subscriptions, analytics dashboards, SEO, architecture upgrades and store releases.

CAPABILITIES

Product

Discovery, scoping, UX/UI, architecture, delivery, iteration

Frontend & mobile

TypeScript, React, Next.js, React Native, Flutter

Backend & data

Node.js, NestJS, Python, Django, SQL, MongoDB, realtime

AI & systems

Agent orchestration, LLM integrations, Docker, Linux, CI/CD

Selected project impact

01 AIDEN

2025 to now ↗

WORK & OUTCOME I conceived and built an AI software workspace that turns structured specs into coordinated agent work across browser, terminal and project state. The result is a public-beta product that lets developers move from brief to validated software in one place.

TYPE

Desktop Web Mobile AI

02 Mobile GOAT

2026 to now ↗

WORK & OUTCOME I built a white-label platform that turns one React Native product into branded iOS and Android apps, with a web back office and tenant-isolated backend. The result is a repeatable way for local businesses to launch loyalty, booking and event experiences without a custom build each time.

TYPE

Mobile Web

03 Intouch

2024 to now ↗

WORK & OUTCOME I delivered full-stack mobile features for location-based discovery, activity creation, profiles, invitations and realtime conversations. The result is a connected social journey from finding something nearby to organising it with other people.

TYPE

Mobile Web

04 Btrend

2024 to 2025 ↗

WORK & OUTCOME I built creator and brand workflows covering matching, campaigns, contracts, invoices and payments in one mobile product. The result is a traceable collaboration flow that replaces scattered operational steps with a single workspace.

TYPE

Mobile Web

05 Monumothèque

2022 to 2023 ↗

WORK & OUTCOME I built search, maps, monument pages, immersive 3D/360° visits and the editorial back office for this heritage platform. The result is a public discovery experience and a maintainable publishing workflow for a large regional catalogue.

TYPE

Web Mobile

06 LaFlowBox

2022 to 2023 ↗

WORK & OUTCOME I built the full-stack platform that turns high-volume transport data into a live 3D network map and focused operational dashboards. The result gives operators a readable view of traffic state and performance as it changes.

TYPE

Web Desktop
